

ABSTRACT

The invention relates to a process for producing a plastic web for coating a metal substrate, in which the plastic used is polyester.

According to the invention, the plastic web is produced by extruding a mixture of various polyesters.

The invention also relates to a laminate comprising a metal substrate and a plastic layer, the plastic layer comprising an adhesive layer which substantially comprises a plastic web produced according to the method according to the invention.

The invention also relates to products and components produced from this laminate.
